Qualys Patch Management

Overview

Qualys.

Current Patch Management Tools

Challenges and Impact

Manual correlation of vulnerability to patch leads to delayed mean-time-to-remediation

Waiting for vulnerability reports to confirm the patch has fixed the vulnerability

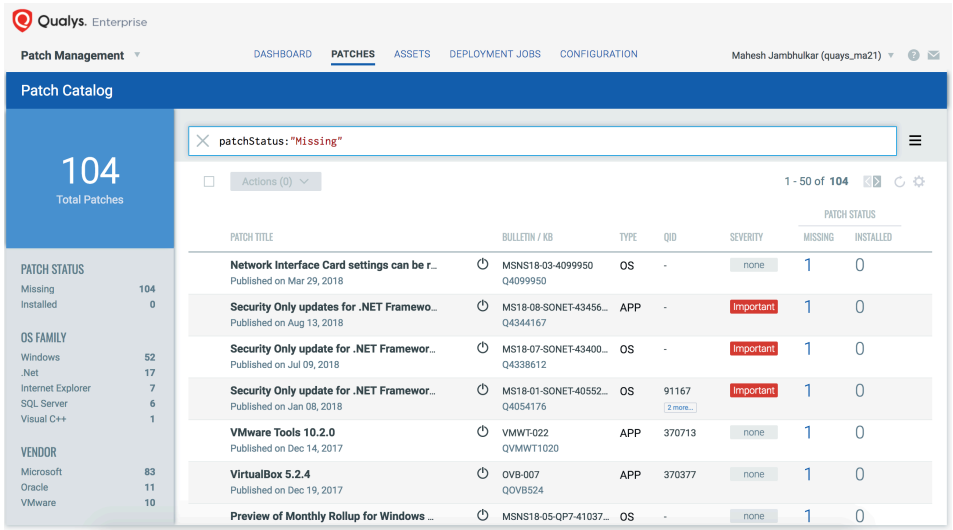
Remote systems only patched when connected to corporate network

Limited or no coverage of third-party apps

Multiple patching solutions for each OS type

Introducing

Qualys' Integrated Patch Management



Automated correlation of vulnerability and patch data – Which patch fixes the CVE?

Simple dashboarding for tracking patch deployments

Patch using the Qualys Cloud Agent, anywhere

Patch OS and third-party applications

Single solution for Windows, macOS, and Linux

Shift From Reaction Mode to Operational Security

Always up-to-date on missing patches

Security and IT teams can "speak the same language"

Collaboration –key to successful digital transformation

Unify discovery, prioritization, and remediation into one platform

Rapid remediation of high-profile vulnerabilities in days vs. weeks

Regularly scheduled deployments are repeatable and reported on

Roadmap

Beta: Q4 2018 – Windows patch deployment
General Availability: Q1 2019

Beta 1

Windows patching (desktops and servers)

Qualys serves patches

Third party Windows applications

Beta 2

On-prem Caching of patches (QGS)

Direct download from vendors for off-prem

Additional tokens for dashboarding

Upcoming

Mac patching

Linux patching

Repository integration

Automation Rules & Approval workflows
